                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a novel seed of the bentgrass plant designated ASR-368. Also disclosed is the method for controlling weeds in a turfgrass stand of bentgrass ASR-368. The plant or plant parts are useful for producing plants with improved agronomic traits, such as herbicide tolerance, particularly to glyphosate herbicide. It may be used as a turfgrass stand. Methods are disclosed that are used for detecting the transgene/genomic junction region in bentgrass plant ASR-368 or its progeny. The present sequence represents the ASR-368 3' transgene/genomic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 474
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New bentgrass ASR-368 plant and seed useful for producing improved glyphosate herbicide tolerance or as a turfgrass

                                                                                                                                                                                                                                                                                                                                                   The invention relates to insect resistant cotton plants, tissues and seeds that include the MON15985 event. The methods and compositions of the invention are useful in the field of plant molecular biology, in particular plant insect protection and plant breeding. The MON15985 event confers resistance to Lepidopteran insect damage. The present sequence is A. tumefaciens DNA used in the exemplification of the invention

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 8, Application US/09872051
Patent No. US20020013960A1
GENERAL INFORMATION:
APPLICANT: Monsanto Co
APPLICANT: Hironaka, Catherine
APPLICANT: Heck, Gregory
APPLICANT: Heck, Gregory
APPLICANT: You, Jinsong
TITLE OF INVENTION: Corn Event PV-ZMGT32(nk603) and Composition and Methods for I
TITLE OF INVENTION: Thereof
FILE REFERENCE: 38-21(52258)B
CUCRENT APPLICATION NUMBER: US/09/872,051
CUCRENT APPLICATION NUMBER: 60/213,567
PRIOR FILING DATE: 2000-06-22
PRIOR APPLICATION NUMBER: 60/213,567
PRIOR APPLICATION NUMBER: 60/213,567
PRIOR APPLICATION NUMBER: 60/241,215
PRIOR APPLICATION NUMBER: 60/241,215
PRIOR APPLICATION NUMBER: 60/240,014
PRIOR PILING DATE: 2000-10-13
NUMBER OF SEQ ID NOS: 16
SOPTWARE: PatentIn version 3.0
SQ ID NO 8
LENGTH: 1193
TYPE: DNA
ORGANISM: Artificial Sequence
FEATURE:
NAME/KEY: SOURCE
LOCATION: (1)..(1183)
OTHER INFORMATION: 1-164 Agrobacterium tumefaciens nos 3' terminator
OTHER INFORMATION: 165-381 Construct vector DNA
OTHER INFORMATION: 687-1183 Zea maize genomic DNA

```

The invention relates to a DNA construct (I) comprising a first (F1) and a second (F2) expression cassette. F1 of the DNA construct, in operable

and

Novel DNA construct useful for producing a corn plant that tolerates application of glyphosate herbicide, comprises two transgene expression

WPI; 2002-165871/22.

Also included are two DNA sequences from corn plant PV-ZMGT32(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell for tolerance to application of glyphosate, and growing the corn cell into a fertile corn plant. The present sequence is a transgene junction probe sequence consisting of corn genomic DNA and vector sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a DNA construct (I) comprising a first (F1) and a second (F2) expression cassette. F1 of the DNA construct, in operable linkage, has rice actin 1 (RA1) promoter, RA1 intron, chloroplast transit peptide gene (II), 9lyphosate tolerant 5-enol-pyruvylshikimate-3-phosphate synthase (FPSPS) gene (III), and transcriptional terminator (IV), and F2 has cauliflower mosaic virus 35S promoter, Hsp70 intron, (III), (III) and (IV). Also included are two DNA sequences from corn plant Pv-ZMGT32(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of 9lyphosate herbicide by transforming a corn cell with, selecting the corn cell into a fertile corn plant. The present sequence is the 1183bp amplicon consisting of the Agrobacteium transcriptional terminator sequence,
                                                    New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                 31-MAR-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification funtations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 1361 BP; 414 A; 322
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   07-FEB-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo sapiens

The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH1363 to AAH18742 represent human cDNAs sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             complementary strand of a polynucleotide which comprises a 5'-end
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human genome; biallelic marker; high density disequilibrium map; genomic map; haplotype; phenotype; polymorphic base; genotyping; haplotyping; hybridisation; identification; characterisation; haplotyping; hybridisation; identification; characterisation; amplification; single nucleotide polymorphism; SNP; PCR primer;

ARX69579 to ARX77440 represent amplification primers for the biallelic markers. The biallelic markers of the invention have a variety of uses: they can be used for high density mapping of the human genome, and in complex association studies and haplotyping studies which are useful in determining the genetic basis for disease states. Compositions and methods of the invention can also be useful for the identification of the targets for the development of pharmaceutical agents and diagnostic methods, as well as the characterisation of the differential efficacious responses to and side effects from pharmaceutical agents acting on a disease as well as other treatment.

N.B. The SEQ ID NOS 2852, 2913, 2974, 3035, 3096, 3157, 3227, 3297 and
The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing
                                                                                                                                                                                                                                                    prostate

                                                                                                                                                                                                       capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABI16176-ABH30511), expressed DNA sequences (ABI01840-ABH16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

                         con human polymucleotides or a polymucleotide which represents a fragment, comprising the variation of the nucleic acid sequence. Also calaimed are a vector comprising the novel polymucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence (which is differentially regulated in an animal subjected to pain and a ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polymucleotide sequence ct that is differentially expressed in neuronal tissue of a first animal cubic telescope in an animal subjected to pain, a method for identifying an agent compound that regulates the activity of one or more of the regulates compound that regulates the activity of one or more of the composition, a compound that regulates the activity of one or more of the regulates the cativity in an animal of one or more of the polypeptides given in the composition and a pharmaceutical composition comprising the one or more completed to pain and a pharmaceutical composition comprising the one or more complypeptides or their antibodies. The polymucleotide or the compound that composition and a pharmaceutical composition comprising the one or more complypeptides or their antibodies. The polymucleotide or the compound that modulates its activity is useful for preparing a medicament for treating capain (e.g. spinal segmental nerve injury (CNI)) in an animal (e.g. gene therapy). The sequence presented is a human DNA (shown in Table 2 of the specification) which encodes one of the polypeptides of the invention contained in electronic form part of the printed specification, but was cotained in electronic form part of the printed specification, but was cotained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human;

                                                                                                                              The invention relates to novel isolated prostate gland related nucleic cc acids (I) and polypeptides (II). (I) and (II) are useful for diagnosis. CC prognosis, prevention, and/or treatment of diseases and/or disorders of the prostate such as acute non-bacterial prostatitis, chronic non-cc bacterial prostatitis, acute bacterial prostatitis, prostatodystonia, prostatosis, granulomatous prostatitis, malacoplakia, benign prostatic cc hypertrophy or hyperplasia, and prostate neoplastic disorders, including cc adenocarcinomas, transitional cell carcinomas, ductal carcinomas, and cc squamous cell carcinomas. (I), (II) and antibody to (II) are useful for diagnosing and treating reproductive system disorders (Paget's disease), cc autoimmune disorders (systemic lupus erythematosus, rheumatoid cc arthritis), blood-related disorders (sickle cell anaemia), hyperproliferative disorders, urinary system disorders (Paget's disease), cc (glomerulonephritis), cardiovascular disorders (arrhythmias), respiratory cellomerulonephritis), cardiovascular disorders (arrhythmias), respiratory cellomerulonephritis), cardiovascular disorders (arrhythmias), respiratory cellomerulonephritis), cardiovascular disorders, neural activity and cellomerulonephritis), cardiovascular disorders, neural activity and cellomerulonephritis), cardiovascular disorders (arrhythmias), respiratory disorders (Alzheimer's disease and Parkinson's disease), pastrointestinal disorders (inflamatory disorders), liver disorders (biliary liver cirrhosis), pancreatic and gall bladder disorders (biliary liver cirrhosis), cuseful to prevent skin aging, for preventing hair loss, to maintain corgans before transplantation, and as food additive or preservative.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL0777-ABB77077). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
The present invention describes isolated polynucleotide sequences (I), which encode polypeptides (II) with biological activity. Also described:
(1) a vector comprising (I); (2) an expression vector comprising (I); (3)
a host cell genetically engineered to comprise (I) which is operatively associated with a regulatory sequence that modulates expression of (I) in the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (I) or the polypeptide of (4) in a sample; (8) identifying a compound that binds to the polypeptide of (4); (9) producing the polypeptide of (4); and (10) a collection of

The polynucleotides (I) can be used as hybridisation probes, oligomers or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA. The present sequence represents a human contrig polynucleotide sequence, which is used in an example from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human immune/haematopoietic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              07-NOV-2001

                                                                                                                                                                 AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) camino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic contivity, and can be used in gene therapy and vaccine production. (I) cyroteins and polynucleotides may be used in the prevention, diagnosis and creatent of diseases associated with inappropriate (I) expression. For cerample, they may be used to treat disporders associated with decreased cexpression by rectifying mutations or deletions in a patient's genome created that affect the activity of (I) by expressing inactive proteins or to complement the patients own production of (I). Additionally, (I) complement the patients own production of (I). Additionally, (I) concludes may be used to produce the secreted (I), by inserting the collic acids into a host cell and culturing the cell to express the complement immune/haematopoietic-related diseases, especially concers and cancer metastases of haematopoietic antigen genomic concers and cancer metastases of haematopoietic antigen genomic concers from the present invention. AAK54942 to AAK54950 and AAM82169 crepresent sequences used in the exemplification of the present invention.
                                                                  Query Match

/note="Vector: pCRII-TOPO (Invitrogen); Site 1: EcoRI;
/note 2: EcoRI; The library was constructed by Claire
Murphy and Dr. James McCarter at Washington University,
St. Louis. Oligo(dT)-SL1 PCR based library. Embryo cDNA
PCR products of size >400 nucleotides containing SL1 on
the 5' end and oligo(dT) on the 3' end were
non-directionally cloned into pCRII-TOPO(Invitrogen)
following the Topo TA cloning protocol. 30-60 cell embryo
material was provided by Dr. Richard Davis of City
University of New York Graduate Center, College of Staten
Island, Staten Island, NY (redavis@postbox.csi.cuny.edu)."
